HIGHER ENDURANCE LEVELS

ABOUT THE VITARADE® BRAND

Vitarade® is a brand that is based on a patented raw material, Vitargo®, which is ideal for endurance as well as endurance and strength sports. All the products have been developed for professional athletes and amateurs alike to ensure effective energy replenishment and utilisation during prolonged exercise.

The Vitarade® range of products contains additional ingredients such as - vitamins and minerals to help strengthen the muscular system, reduce dehydration and improve overall physical performance.

The Vitarade® brand offers a variety of products such as bars, energy gels and drink powders that are ideal for athletes of all disciplines and physically active people.

Together with Vitargo® you can work out for longer and at a higher intensity!

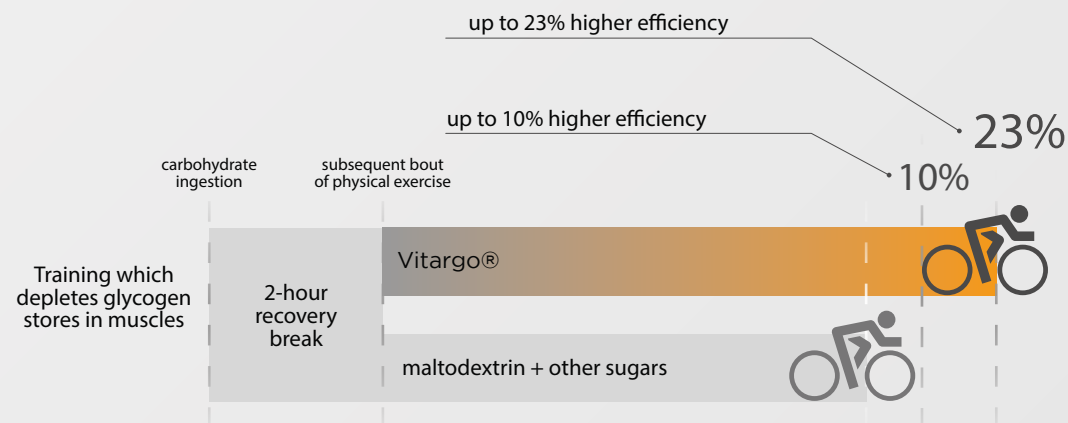

WHAT IS VITARGO®?

Vitargo® is a patented, soluble form of corn starch that provides energy before and during exercise and fast recovery after intense workouts. Thanks to its unique properties, it leaves the stomach very quickly and travels to the muscle cells to replenish the reserves of fuel, i.e. muscle glycogen.

HOW DOES VITARGO® WORK?

The product has a low osmolarity, so it is absorbed faster than other types of carbohydrate, maintaining a constant blood sugar concentration. Scientific studies have shown that glycogen recovery following its ingestion is 70% faster within 1 hour, and 77% within 2 hours, than after consuming the same amount of other sugars.

This is the type of carbohydrate that offers high levels of bioavailability and most effective action for athletes.

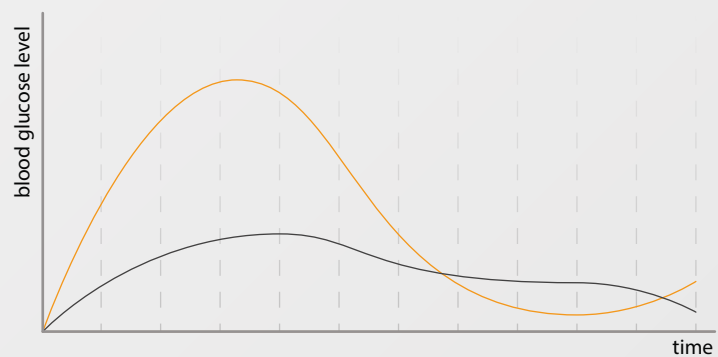

70% faster muscle glycogen resynthesis rate, compared to maltodextrin with sugars.

Backed by research on athletes, at independent research centres.

Vitargo®

Enduracarb® (trehalose) consists of two glucose molecules. It does not contain any fructose molecules. It is a slow acting "double sugar" and it has been proven to outperform other carbohydrate sources during prolonged periods of intense exercise.

- product with a high glycaemic index (Vitargo)
- product with a low glycaemic index (Enduracarb)

Aquamin® Sea Minerals is an ingredient derived from red seaweed that is rich in natural minerals such as calcium, magnesium, and other trace elements such as iodine, iron, and copper. It is sourced off the coast of Iceland and it retains its natural structure, which means that it contains minerals in organic form, making it easier for the body to absorb them.

Aquamin® Sea Minerals contributes to replenishing the minerals that the body loses during intensive training. Therefore, the combination of Vitargo® with Aquamin® Sea Minerals is a good choice for physically active people who have an increased demand for minerals.

ABOUT THE PRODUCT

Vitarade® is a product based on Vitargo® – a patented form of carbohydrates, in the form of an easily soluble powder. In addition, the product has been enriched with Enduracarb®, a patented source of glucose, and Aquamin® S, a mineral extracted from marine algae.

- ✓ A concentrated and bioavailable source of carbohydrates.
- ✓ Carbohydrates with fast and long absorption rates.
- ✓ Source of natural mineral ingredients.

VITARADE® EL fueled by Vitargo®. Food supplement.

40 mg
CAFFEINE **Vitargo**

Vitargo® Liquid Energy is an energy gel designed for athletes. Consumption of carbohydrates is especially recommended before and during long workouts. The product, thanks to its liquid form, does not require washing it down with water, which is a great advantage.

- ✓ A concentrated form of carbohydrates
- ✓ Different kinds of carbohydrates
- ✓ Source of potassium and magnesium
- ✓ Contains caffeine
- ✓ Gel consistency
- ✓ No washing down required
- ✓ Refreshing taste and convenient packaging

Vitargo® Liquid Energy. Food supplement.

PRE
WORKOUT

1

Drink Vitarade® 20 - 60 minutes before training. The product starts to exit the stomach after only 10 minutes following ingestion, without causing discomfort to the digestive system.

DURING
WORKOUT

2

Vitarade® products are also ideal during workouts and in short breaks between them. There are observed benefits associated with carbohydrate consumption during workouts lasting longer than 90 minutes.

AFTER
WORKOUT

3

The process of rebuilding muscle energy reserves is much more dynamic if carbohydrate intake occurs immediately after the workout. Studies show that glycogen restoration after the ingestion of Vitargo® is 130% faster than after the ingestion of other sugars.
